The application of any of the above by any other means such as branding, application of decals, etc. shall not be acceptable. Tires offered shall have been tested to meet or exceed American Society of Testing and Materials (ASTM) Standard F1922 for highway tires, F1923 for Off Road/Low Speed tires, and meet operations performance levels and marking requirements of Federal Standards FMVSS 109 for new pneumatic passenger tires, FMVSS 139 for new pneumatic radial tires for light vehicles, and FMVSS 119 for new pneumatic non-passenger Multi-Passenger Vehicles (MPVs), trucks, buses, and trailers.

1. **Pursuit and Performance Tires.** Pursuit and performance tires include tires for police and other pursuit vehicles and for other high-speed, performance vehicles. This subcategory includes any tire that is H, V, W, Y, or ZR rated or above. An H rating is the minimum speed rating for tires in this subcategory. Tires shall be new, standard production tires expressly designed and certified by manufacturer for high speed operation and shall exhibit exceptional safety, stability, handling, and stopping characteristics. Offeror shall maintain evidence/certifications that such

tires meet all laboratory test and size requirements of Federal Standards MVSS 109.

2. **Automobile/Passenger Vehicles.** These tires include common passenger car tires and are designated with a “P” at the beginning of the tire size. Common applications for these types of tires would be passenger cars and minivans. Tires shall be of standard OEM quality equal to or superior in every respect to those normally furnished as original equipment for such vehicles.
3. **Light Duty Trucks Radial and Bias.** These tires can usually be identified by the letters “LT” at the beginning of the tire size. Common applications for these types of tires would be pickup trucks, sport utility vehicles, full size vans, and some trailers. Tires shall be of standard OEM quality equal to or superior in every respect to those normally furnished as original equipment for such vehicles.
4. **Medium Commercial/Heavy Duty Trucks/Buses.** These tires do not have a letter at the beginning of the tire size. Tires shall be of standard OEM quality equal to or superior in every respect to those normally furnished as original equipment for such vehicles.
5. **Off-the-Road OTR and Low Speed Off Highway Tires (Radial and Bias).** Common applications are heavy construction equipment such as wheel loaders, backhoes, graders, and trenchers. Tires shall be of standard OEM quality equal to or superior in every respect to those normally furnished as original equipment for such vehicles.

10. **Retread Tires – Optional Service.** A retread tire undergoes a manufacturing process to replace the worn tread on used tires to extend the longevity of the tire.

B. **Low Roll Resistance Tires.** Because of average fuel economy standards, the auto industry generally equips new vehicles with tires that have significantly lower rolling

resistance and better fuel economy than the average replacement tire. Replacement tires do not have to meet original equipment fuel efficiency standards as there is very little information regarding their rolling resistance and their relative fuel economy characteristics.

- C. **Tubes.** All inner tubes shall be standard production first line, heavy duty butyl tubes or natural rubber of fresh stock. All tubes shall be of quality not less than the tubes normally furnished in representative quantities by OEM as original equipment for automobiles, trucks, tractors, buses, backhoes, loaders, motor graders, and other heavy equipment.
