Definitions

- **Infrastructure as a Service (IaaS)** is defined the capability provided to the end user to provision processing, storage, networks, and other fundamental computing resources where the consumer is able to deploy and run arbitrary software, which can include operating systems and applications. The end user does not manage or control the underlying cloud infrastructure but has control over operating systems, storage, deployed applications; and possibly limited control of select networking components (e.g. host firewalls).
- **Platform as a Service (PaaS)** is defined as the capability provided to the consumer to deploy onto the cloud infrastructure end user created or-acquired applications created using programming languages and tools supported by the provider. This capability does not necessarily preclude the use of compatible programming languages and tools supported by the provider. This capability does not necessarily preclude the use of compatible programming languages, libraries, services, and tools from other sources. The end user does not manage or control the underlying cloud infrastructure including, network, servers, operating systems, or storage, but has control over the deployed applications hosting environment configurations.
- **Service Level Agreement (SLA)** means the SLA obligations the service provider publishes in its service terms or a written agreement between both the Purchasing Entity and the Contractor that is subject to the terms and conditions and relevant Participating Addendum unless otherwise expressly agreed in writing between the Purchasing Entity and the Contractor. SLA's should include: (1) the technical service level performance promises, (i.e. metrics for performance and intervals for measure), (2) description of service quality, (3) identification of roles and responsibilities, (4) remedies, such as credits, and (5) an explanation of how remedies or credits are calculated and issued.

Master Agreement Overview

Data Security

- Cloud Security Alliance recommendations were incorporated into the RFP requirements.
 - Must meet NIST characteristics (i.e. be a true cloud service provider)
 - Must meet security requirements, which leverage the following cloud-focused security frameworks:
 - CSA STAR
 - ISO/IEC 27017
 - NIST SP 800-53 (basis for FedRAMP)

Data classification: 1st step in determining the security controls. CIO's should consider:

- Understand the Breach Notification Laws (for PII or personally identifiable information) in your jurisdiction – 47 out of 50 States have this laws (exceptions are Alabama, New Mexico, South Dakota).
- Determine the sensitivity of the data and if PII is involved
- Risk level set by consequences of exposure
- Most frameworks use three tier classification model (e.g. Low, Medium, High; Official, Secret, Top Secret)

Data Classification and Security Controls

- Understand the customer's responsibilities (e.g. for IaaS and PaaS, customer defines requirement for encryption)
- Leverage industry standard certifications to demonstrate compliance for cloud security controls, use information from Cloud Security Alliance tools to short-list vendors. Review may not comply with the specific controls that your organization needs.
- Identify specific controls and request additional certifications to comply with privacy requirements when PII is involved (for example ISO/IEC 27018).

Using Cloud Security Alliance Tools

- Cloud Controls Matrix (CCM) – security controls framework for cloud.
- Consensus Assessment Initiative Questionnaire (CAIQ) assessment tool based on CCM.
- CSA STAR (Security, Trust and Assurance Registry) - provider Assurance Program. Leverages CCM & CAIQ as its foundation.

Nail Your Business Case

- SLA Must Be Complete. – No Gray Areas! Understand the application and what is in scope and out of scope.
- Clarify Ownership of Tasks and Deliverables – essential for IaaS and PaaS.
- Do not rely on Generic Definitions
- Document Business Value Expectations
- Define Cost to Manage Risk and Quality (Security, Archiving, Backup, DR as related to the application)

SLA's

- The Master Agreement include SLA's that outline security controls the Contractor employs specific to the data they are prepared to handle.
- The CIO needs to evaluate each Master Agreement receiving a service category award (SaaS, PaaS, or IaaS) in order to compare services and security standards before making a determination as to which Contractor's cloud solution and security controls best meets their program objectives and state laws.

SLA Cannot Be An Afterthought

- Link to organizations SMART Objectives: Specific, Measurable, Actionable, Relevant and Time-Bound.
- Review SLA(s) and Terms and Conditions included in the ValuePoint-Utah Master Agreement for service commitments, remedies, and penalties. Ensure SLA(s) align with organizational SMART objective and business needs.
- Closely evaluate all Terms and Conditions for SLA(s) exclusions.
- Consider review process for adjustments to SLA(s) over time.

Recommendations

- Clearly define the scope and objectives of your cloud application. Align with expectations of key stakeholders.
- Transition planning must be a part of your strategy.
- Evaluate the comprehensiveness and achievability of the transition plan.
- Jointly manage the transition plan and escalate issues before they become risks.
- Measure and proactively manage transition processes to achieve success.
